1. Presentation of Ecole Centrale de Lyon

The Ecole Centrale de Lyon (ECL) is a French public institution of higher education and research, created in 1857. About 3,640 students are trained each year, 25% of them are international students. Research is a major activity of ECL, thanks to its 6 laboratories and 256 researchers, active in engineering sciences: acoustics, systems dynamics, electrical engineering, computer science, mathematics, fluid mechanics, nanotechnologies, tribology, etc. ECL is also involved in 8 international laboratories, with Australia, Brazil, Canada, China, Korea, Spain and Japan and leads a close collaboration with the industrial research community.

2. Implementation of the HRS4R action plan

*The HRS4R policy*

In 2007, Centrale Lyon committed itself to a process of progress concerning the recruitment, career and mobility of researchers, by signing the European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers.

The Charter and the Code advocate 40 principles to promote the mobility and career of researchers in Europe according to 4 main axes:

- Ethical and professional principles (freedom of research, non-discrimination, evaluation...)
- Recruitment (transparency of procedures, judgement on merit, valuing mobility, etc.)
- Working conditions and safety (research environment, career development, gender equality, representation, etc.)
- Training (supervision/mentoring, access to training, continuing professional development, etc.)

The European Commission urges each education and research institution to go further in this process, and to this end, launched under the French EU Presidency in 2008, the Human Resources Strategy for Researchers (HRS4R) which encourages to

- Deploy its human resources management strategy in research,
- Develop its practices and get as close as possible to the recommendations set out in the European Charter for Researchers and the Recruitment Code.

Centrale Lyon wished to pursue its approach on this subject by submitting an application for HRS4R labelling in 2019, including an analysis of the existing situation, the identification of progress margins and an action plan over 24 months.

Centrale Lyon obtained the HRS4R label in 2020, thus enabling it to extend its visibility at the European and international levels, to increase its attractiveness and to continue its activity in the European research framework programme.

*Follow-up arrangements for the action plan*

In order to ensure the follow-up of the HRS4R action plan defined in 2019, a steering committee of 3 people has been set up involving the General Director of Services, the Director of Human Resources and the European Affairs Manager. These people were appointed by the ECL Director and are directly involved in the HRS4R process within the school. The Steering Committee reports twice a year to the Supervisory Committee, which is composed of the Director of the organisation (President) and the Director of Research and Innovation.
This steering committee is led by the project manager, who is also responsible for European affairs within the partnership, research and development department, under the aegis of the research department. She has met several times a year with each of the people responsible for the 30 actions initially planned, in order to ensure the continuity of the action plan and possibly the pooling of certain ideas related to several actions.

**Context**

Three major events have impacted the institution over the last two years:

The covid-19 crisis and the successive reorganisations required by the lockdowns have slowed down the implementation of the HRS4R action plan which had been defined in 2019. Indeed, the main priorities in 2020 were to maintain student training and research activities on a remotely base, and to develop dematerialisation. This explains why some of the objectives set out in the HRS4R action plan could not be completed within the two-year timeframe.

In addition, the Saint-Etienne National Engineering School (ENISE) became an internal school of Centrale Lyon, which generated several months of organisational and human changes, and also had an impact on the implementation of the HRS4R action plan.

Finally, a change in the ECL’s management has occurred in recent months, with three key people in the steering of the action plan retiring and being replaced between December 2020 and April 2022, namely the President, the director of research and the general director of services. These new people have quickly taken on board this HRS4R approach.

The 2030 strategy currently being defined within the institution should have a positive impact on the action plan, as this strategy takes into account the quality of work life, corporate social responsibility, and the attractiveness of the institution for researchers.

The implementation of this strategy will be taken into account by the steering committee and by the supervisory committee, which will allow practices to evolve in the spirit of a continuous improvement approach.
3. Action plan assessment

Evolution of the institution's strengths and weaknesses

The implementation of the HRS4R action plan over the last two years has enabled the institution's strengths and weaknesses identified during the initial analysis phase to evolve. The main progress is detailed below for each of the 4 axes of the European Charter for Researchers.

Ethical and professional aspects

A major project was carried out on open science, which led to the following in 2020:

- The definition of an institutional policy,
- The development of a guide for researchers,
- The setting up of information workshops to support researchers in their open access publication process and in the opening of research data.

This action will continue in the coming years with the implementation of recommendations and tools for data backup.

The institution has also evolved on complementary subjects, with the constitution of an inter-institutional ethics committee at the University of Lyon, the implementation of the incentive for patent filing and the procedure concerning cumulative authorisations.

Recruitment and selection

In this area, the ECL's greatest weakness was the OTM (open, transparent and merit-based) recruitment: while this practice has been in place for many years for the recruitment of civil servant researchers, it had not been implemented for contract researchers. This particularly concerned doctoral students and post-doctoral fellows recruited on research contracts subsidised by France or the European Commission, but also by industrial partners.

In 2021, ECL has defined an OTM-R recruitment policy for contract researchers, which will be applied in the coming months, thanks to the deployment of a dedicated tool.

In addition, insofar as the ECL’s subsidiary, Centrale Innovation, manages part of the organisation’s research projects, it regularly recruits researchers. Consequently, the subsidiary has also defined an OTM-R policy and is currently in the process of deploying recruitment assistance software.

Working conditions

The main action carried out in this area concerns the development of an action plan for the quality of work life, co-designed with the staff and the organisation’s management. On the basis of a diagnosis carried out
in 2022, 99 actions were identified and then prioritised, leading to the definition of an annual plan of 10 actions in 2022 which will be continued in the following years.

Training and development

In terms of training and development of researchers, the ECL's strength lies in the lifelong training of researchers, from R1 to R4 level. The organisation has a varied catalogue of training courses in science and technology, languages and soft skills.

In this area, the organisation has completed its training offer with the implementation of a training programme for thesis supervisors/directors for the supervision of doctoral students.

Follow-up of actions

The action plan drawn up in 2019 identified 30 objectives to be achieved between 2020 and 2022.

The analysis of this plan, carried out in July 2022, shows that 26 actions have been partially or totally achieved (i.e. 87% of the planned actions), and that 3 actions falling within the scope of the HRS4R strategy, not initially planned, have also been achieved.

Table 1 summarises the state of play of all actions foreseen in the initial plan. Ongoing actions have been rescheduled for the period 2022-2025, with their new end date indicated next to their status. For completed actions, their completion date is indicated. Finally, two actions have been completed but are of a long-term nature and are marked with the status "extended".

In some cases, the Responsible Unit has changed, and these changes have been taken into account in this table.

Table 3: New actions planned

4. Continuation of the revised action plan

This revised action plan, including ongoing, extended and new actions, will be followed up over the next three years by the Steering and Supervisory Committees. Two surveys will be conducted among researchers during this period, in order to collect their perception of the achievements made through the implementation of this action plan, to identify issues for improvement and to bring out new needs. The results of these surveys will contribute to the construction of the next action plan in 2025, and to the preparation of the audit for the renewal of the HRS4R label in three years.
